## Volume 53

|                                                                                                                                                                                                                                                                                                                                |       |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| Analysis of cytological changes in hepatocytes from rats dosed with 3'-methyl-4-dimethylaminoazobenzene: initial response appears to involve cytokinesis of binucleated cells<br>M.D. Kelly, J.A. Styles and N.R. Pritchard (Cheshire, U.K.)                                                                                   | 1–4   |
| Evidence of 1,25-dihydroxyvitamin D synthesis by the rat Walker carcinosarcoma 256<br>M.L. Traba, F. Risco, J. Hurtado, F. de Miguel, P. Esbrit and A. Rapado (Madrid, Spain)                                                                                                                                                  | 5–8   |
| Biotransformation of carbon tetrachloride and lipid peroxidation promotion by liver nuclear preparations from different animal species<br>G.D. Castro, M.I. Díaz Gómez and J.A. Castro (Buenos Aires, Argentina)                                                                                                               | 9–15  |
| Inhibition of the promotional phase of azoxymethane-induced colon carcinogenesis in the F344 rat by calcium lactate: effect of simulating two human nutrient density levels<br>M.J. Wargovich, D. Allnutt, C. Palmer, P. Anaya and L.C. Stephens (Houston, TX)                                                                 | 17–25 |
| Cumulative reduction of primary skin tumor growth in UV-irradiated mice by the combination of retinyl palmitate and canthaxanthin<br>H.L. Gensler, M. Aickin and Y.M. Peng (Tucson, AZ)                                                                                                                                        | 27–31 |
| Relationship between hepatic peroxisome proliferation and 8-hydroxydeoxyguanosine formation in liver DNA of rats following long-term exposure to three peroxisome proliferators; di (2-ethylhexyl) phthalate, aluminium clofibrate and simfibrate<br>A. Takagi, K. Sai, T. Umemura, R. Hasegawa and Y. Kurokawa (Tokyo, Japan) | 33–8  |
| Activation of N-nitrosobis(2-oxopropyl)amine by liver and nasal mucosa tissue from intact and castrated male rats<br>T.A. Lawson (Omaha, NE)                                                                                                                                                                                   | 39–43 |
| A comparison of levels of intrinsic single strand breaks/alkali labile sites associated with human melanoma cell invasion<br>L.C. Meade-Tollin, B.L. Pipes, S.J. Anderson, E.A. Seftor and M.J.C. Hendrix (Tucson, AZ)                                                                                                         | 45–54 |
| Fibrinolytic activity of rat plasma during development of Guerin epithelioma<br>R. Tomasiuk, M. Mirowski and R. Wierzbicki (Lodz, Poland)                                                                                                                                                                                      | 55–59 |
| Oral administration of chlordiazepoxide plus sodium nitrite investigated for tumor initiating activity in the rat liver<br>E. Mereto, G. Brambilla Campart, M. Ghia and F. Petrogalli (Genoa, Italy)                                                                                                                           | 61–65 |
| Is 1,4-dioxane a genotoxic carcinogen?<br>K.T. Kitchin and J.L. Brown (Research Triangle Park, NC)                                                                                                                                                                                                                             | 67–71 |
| Establishment of DDD/1-Mtv-2/Mtv-2, nu/nu and DDD/1-Mtv-2/Mtv-2, nu/+ mice: preliminary characterization in relation to MTV antigen expression and mammary tumorigenesis<br>A. Tsubura, S. Morii, T. Moriyama and A. Matsuzawa (Osaka and Tokyo, Japan)                                                                        | 73–78 |
| Errata                                                                                                                                                                                                                                                                                                                         | 79    |
| <b>Review Letter</b>                                                                                                                                                                                                                                                                                                           |       |
| Consumption of methylxanthine-containing beverages and the risk of breast cancer<br>F. Lubin and E. Ron (Bethesda, MD)                                                                                                                                                                                                         | 81–90 |
| Involvement of urine in epithelial-stromal interactions in urinary bladder carcinogenesis<br>H. Momose, K. Uchida, H. Kakinuma, Y. Yura and R. Oyasu (Chicago, IL)                                                                                                                                                             | 91–96 |

|                                                                                                                                                                                                                                                                                                                 |         |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Systemic treatment of a human epidermoid non-small cell lung carcinoma xenograph with a zanthate compound causes extensive intratumoral necrosis<br>G. Sauer, E. Amtmann and W. Hoffmann (Heidelberg, F.R.G.)                                                                                                   | 97—102  |
| The cytotoxic effect of ajoene, a natural product from garlic, investigated with different cell lines<br>K. Scharfenberg, R. Wagner and K.G. Wagner (Braunschweig, FRG)                                                                                                                                         | 103—108 |
| The concentration of glucose in the culture medium determines the effect of suramin on the growth and differentiation of the human colonic adenocarcinoma cell clone HT29-D4<br>C. Rabenandrasana, S. Baghdiguian, M. Roccabianca, M. Brunet, J. Marvaldi and J. Fantini (Marseille, France)                    | 109—115 |
| Effect of sex and age on rectal cell renewal in humans<br>G.M. Paganelli, R. Santucci, G. Biasco, M. Miglioli and L. Barbara (Bologna, Italy)                                                                                                                                                                   | 117—121 |
| Comparative study of the therapeutic effect of photoactivated hematoporphyrin derivative and aluminum disulfonated phthalocyanines on tumor bearing mice<br>G. Canti, P. Franco, O. Marelli, R. Cubeddu, P. Taroni and R. Ramponi (Milan, Italy)                                                                | 123—127 |
| Localization of potent photosensitizers in human tumor LOX by means of laser scanning microscopy<br>Q. Peng, J. Moan, G. Farrants, H.E. Danielsen and C. Rimington (Oslo, Norway)                                                                                                                               | 129—139 |
| Anti-tumor-promoting activity of derivatives of abieslactone, a natural triterpenoid isolated from several <i>Abies</i> genus<br>J. Takayasu, R. Tanaka, S. Matsunaga, H. Ueyama, H. Tokuda, T. Hasegawa, A. Nishino, H. Nishino and A. Iwashima (Kyoto, Osaka and Shiga, Japan)                                | 141—144 |
| Localization and production of proteoglycans by HT1080 cell lines with altered <i>N-ras</i> expression<br>J. Timar and H. Paterson (Budapest, Hungary and London, U.K.)                                                                                                                                         | 145—150 |
| Promoting action of prolactin released from a grafted transplantable pituitary tumor (mtT/F84) on rat prostate carcinogenesis<br>A. Nakamura, T. Shirai, K. Ogawa, S. Wada, N.-A. Fujimoto, A. Ito and N. Ito (Nagoya and Hiroshima, Japan)                                                                     | 151—157 |
| Glucose-6-phosphate dehydrogenase (G6PD) activity in tumoral tissues of G6PD-deficient subjects affected by larynx carcinoma<br>S. Dessi, B. Batetta, P. Pani, S. Barra, F. Miranda and P. Puxeddu (Cagliari, Italy)                                                                                            | 159—162 |
| Acute inhibition of DNA synthesis in hamster buccal pouch<br>(M. Nagabhushan, Y.-K. Ng, R. Elias, P.J. Polverini and D.B. Solt (Chicago, IL)                                                                                                                                                                    | 163—173 |
| Effects of the plant flavonoid baohuoside-1 on cancer cells in vitro<br>S.Y. Li, B.S. Teh, W.K. Seow, F. Li and Y.H. Thong (Brisbane, Australia and Beijing, Peoples Republic of China)                                                                                                                         | 175—181 |
| Comparison of free and liposome encapsulated doxorubicin tumor drug uptake and antitumor efficacy in the SC115 murine mammary tumor<br>L.D. Mayer, M.B. Bally, P.R. Cullis, S.L. Wilson and J.T. Emerman (Vancouver, Canada)                                                                                    | 183—190 |
| Carcinogenic activity of a carbamate fungicide, mancozeb on mouse skin<br>Y. Shukla, M. Antony, S. Kumar and N.K. Mehrotra (Lucknow, India)                                                                                                                                                                     | 191—195 |
| In vivo binding of 3,3'-dichlorobenzidine to rat and mouse tissue DNA<br>A. Ghosal and M.M. Iba (Piscataway, NJ)                                                                                                                                                                                                | 197—204 |
| Increased expression of <i>c-jun</i> gene during spontaneous hepatocarcinogenesis in LEC rats<br>H. Suzuki, H. Fujita, L. Lullauer, N. Kuzumaki, S. Konaka, Y. Togashi, N. Takeichi, Y. Kawamukai and J. Uchino (Sapporo, Japan)                                                                                | 205—212 |
| Low level amplification of <i>c-sis</i> and <i>c-myc</i> in a spontaneous osteosarcoma model<br>D.T. Kochevar, J. Kochevar and L. Garrett (College Station, TX)                                                                                                                                                 | 213—222 |
| In vivo effects of recombinant interferon- $\gamma$ : augmentation of endotoxin-induced necrosis of tumors and priming of macrophages for tumor necrosis factor- $\alpha$ production<br>R.M. Lorence, C.K. Edwards, III, R.J. Walter, K.W. Kelley and J.A. Greager (Chicago and Urbana, IL and Kansas City, MO) | 223—229 |
| Subject Index Volume 53                                                                                                                                                                                                                                                                                         | 231—233 |
| Author Index Volume 53                                                                                                                                                                                                                                                                                          | 235—236 |
| Contents Volume 53                                                                                                                                                                                                                                                                                              | 237—238 |

|                                                                                                                                                                                      |         |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Comparison of free and liposome encapsulated doxorubicin tumor drug uptake and antitumor efficacy in the SC115 murine mammary tumor                                                  |         |
| L.D. Mayer, M.B. Bally, P.R. Cullis, S.L. Wilson and J.T. Emerman (Vancouver, Canada) . . . . .                                                                                      | 183—190 |
| Carcinogenic activity of a carbamate fungicide, mancozeb on mouse skin                                                                                                               |         |
| Y. Shukla, M. Antony, S. Kumar and N.K. Mehrotra (Lucknow, India) . . . . .                                                                                                          | 191—195 |
| In vivo binding of 3,3'-dichlorobenzidine to rat and mouse tissue DNA                                                                                                                |         |
| A. Ghosal and M.M. Iba (Piscataway, NJ) . . . . .                                                                                                                                    | 197—204 |
| Increased expression of <i>c-jun</i> gene during spontaneous hepatocarcinogenesis in LEC rats                                                                                        |         |
| H. Suzuki, H. Fujita, L. Lullauer, N. Kuzumaki, S. Konaka, Y. Togashi, N. Takeichi, Y. Kawamukai and J. Uchino (Sapporo, Japan) . . . . .                                            | 205—212 |
| Low level amplification of <i>c-sis</i> and <i>c-myc</i> in a spontaneous osteosarcoma model                                                                                         |         |
| D.T. Kochevar, J. Kochevar and L. Garrett (College Station, TX) . . . . .                                                                                                            | 213—222 |
| In vivo effects of recombinant interferon- $\gamma$ : augmentation of endotoxin-induced necrosis of tumors and priming of macrophages for tumor necrosis factor- $\alpha$ production |         |
| R.M. Lorence, C.K. Edwards, III, R.J. Walter, K.W. Kelley and J.A. Greager (Chicago and Urbana, IL and Kansas City, MO) . . . . .                                                    | 223—229 |
| Subject Index Volume 53 . . . . .                                                                                                                                                    | 231—233 |
| Author Index Volume 53 . . . . .                                                                                                                                                     | 235—236 |
